June 17, 1986

Mr. Bill Burrows
709 Division Street
Gloucester City, New Jersey 08030

Dear Mr. Burrows:

Thank you for your reception report dated June 8, 1986. A check of our program log for that date shows your information to be correct.

WDEL operates on an assigned frequency of 1150 Khz with a power output of 5,000 watts both day and night. The station changes its coverage pattern at approximately sun-up and sun-down each day. The main lobe of our pattern is beamed in a southeasterly direction.

Enclosed please find a copy of our coverage map, embossed and initialed, which should answer your request for verification.

Although you probably could not tell during the game, WDEL also operates the C-Quam stereo system during music programming. Listen sometime and let us know how you hear us!

Thanks again for your report.

Sincerely,

Bill Blatz
Assistant Chief Engineer
